

# ESD7181, SZESD7181

## ESD Protection Diode

### Micro-Packaged Diodes for ESD Protection

The ESD7181 is designed to protect voltage sensitive components that require ultra-low capacitance from ESD and transient voltage events. Excellent clamping capability, low capacitance, low leakage, and fast response time make these parts ideal for ESD protection on designs where board space is at a premium. It has industry leading capacitance linearity over voltage making it ideal for RF applications.

#### Features

- Low Capacitance 0.3 pF (Typical)
- Low Clamping Voltage
- Small Body Outline Dimensions: (0.62 x 0.32 mm) – 0201
- Low Body Height: 0.3 mm
- Working Voltage:  $\pm 18.5$  V
- Low Leakage < 1 nA (Typical)
- Low Insertion Loss
- Low Dynamic Resistance: < 1  $\Omega$
- IEC61000-4-2 Level 4 ESD Protection
- SZ Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q101 Qualified and PPAP Capable
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

#### Typical Applications

- RF Signal ESD Protection
- Wireless Charger
- RF Switching, PA, and Antenna ESD Protection
- Near Field Communications

#### MAXIMUM RATINGS ( $T_A = 25^\circ\text{C}$ unless otherwise noted)

| Rating   | Symbol                   | Value          | Unit                            |
|--|--------------------------|----------------|---------------------------------|
| IEC 61000-4-2 (ESD) (Note 1) Air   |                          | 15             | kV                              |
| IEC 61000-4-2 (ESD) (Note 1) Contact   |                          | 12             | kV                              |
| IEC 61000-4-5 (ESD) (Note 2)   |                          | 1              | A                               |
| Total Power Dissipation (Note 3) @ $T_A = 25^\circ\text{C}$<br>Thermal Resistance, Junction-to-Ambient | $P_D$<br>$R_{\theta JA}$ | 250<br>400     | mW<br>$^\circ\text{C}/\text{W}$ |
| Junction and Storage Temperature Range   | $T_J, T_{stg}$           | -55 to<br>+150 | $^\circ\text{C}$                |
| Lead Solder Temperature – Maximum<br>(10 Second Duration)  | $T_L$                    | 260            | $^\circ\text{C}$                |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Non-repetitive current pulse at  $T_A = 25^\circ\text{C}$ , per IEC61000-4-2 waveform.
2. Non-repetitive current pulse at  $T_A = 25^\circ\text{C}$ , per IEC61000-4-5 waveform.
3. Mounted with recommended minimum pad size, DC board FR-4

Figure 3. IEC61000-4-2 Spec

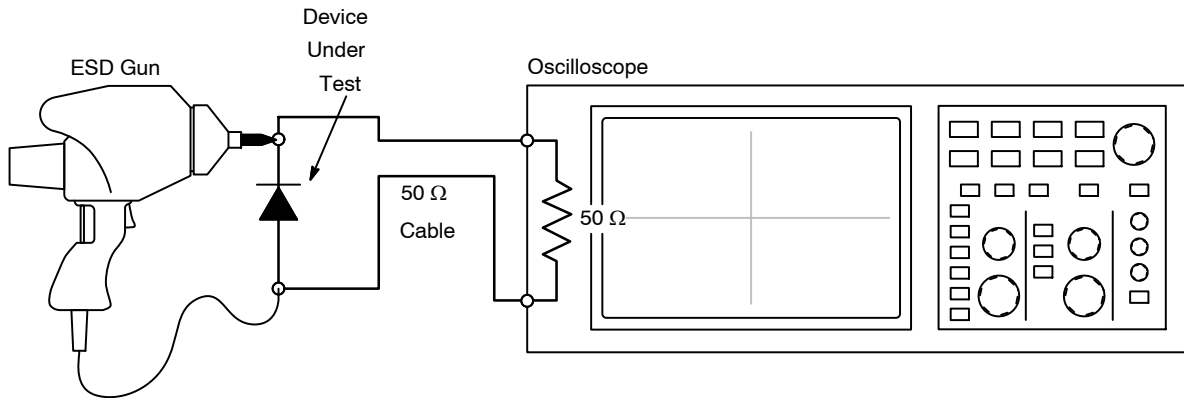

Figure 4. Diagram of ESD Clamping Voltage Test Setup

The following is taken from Application Note AND8308/D – Interpretation of Datasheet Parameters for ESD Devices.

### ESD Voltage Clamping

For sensitive circuit elements it is important to limit the voltage that an IC will be exposed to during an ESD event to as low a voltage as possible. The ESD clamping voltage is the voltage drop across the ESD protection diode during an ESD event per the IEC61000-4-2 waveform. Since the IEC61000-4-2 was written as a pass/fail spec for larger

systems such as cell phones or laptop computers it is not clearly defined in the spec how to specify a clamping voltage at the device level. ON Semiconductor has developed a way to examine the entire voltage waveform across the ESD protection diode over the time domain of an ESD pulse in the form of an oscilloscope screenshot, which can be found on the datasheets for all ESD protection diodes. For more information on how ON Semiconductor creates these screenshots and how to interpret them please refer to AND8307/D.

Figure 5. Typical Positive TLP IV Curve

Figure 6. Typical Negative TLP IV Curve

NOTE: TLP parameter:  $Z_0 = 50 \Omega$ ,  $t_p = 100 \text{ ns}$ ,  $t_r = 300 \text{ ps}$ , averaging window:  $t_1 = 30 \text{ ns}$  to  $t_2 = 60 \text{ ns}$ .

**Transmission Line Pulse (TLP) Measurement**

Transmission Line Pulse (TLP) provides current versus voltage (I-V) curves in which each data point is obtained from a 100 ns long rectangular pulse from a charged transmission line. A simplified schematic of a typical TLP system is shown in Figure 7. TLP I-V curves of ESD protection devices accurately demonstrate the product’s ESD capability because the 10s of amps current levels and under 100 ns time scale match those of an ESD event. This is illustrated in Figure 8 where an 8 kV IEC 61000-4-2 current waveform is compared with TLP current pulses at 8 A and 16 A. A TLP I-V curve shows the voltage at which the device turns on as well as how well the device clamps voltage over a range of current levels.
