## DRV8412EVM Motor Drive Evaluation Board

The DRV8412 customer evaluation module demonstrates the operation and performance of the DRV8412 device from Texas Instruments. The EVM can be used with a MCU controller module or can be wired into an existing system.

## 1 Introduction

### 1.1 Description

The DRV8412 is a dual full bridge PWM motor driver. It has a maximum recommended supply voltage of 50 V with an absolute maximum of 70 V . The DRV8412 is capable of delivering $2 \times 3 \mathrm{~A}$ continuous output current and 2x6A peak current per device. The DRV8412 has an advanced protection system consisting of short-circuit protection, overcurrent protection, undervoltage protection, and two-stage thermal protection.
The DRV8412EVM can be operated with either two full bridge outputs or 4 half bridge outputs. It can also be used in parallel mode to double the current capability. The unit can be operated with external PWM inputs using a MCU controller module or signal generator, etc. The outputs and power supplies can be connected using stripped wires by connecting them to the on-board terminal blocks. The EVM module also has hardware switches to control the modes and to allow a manual reset.

### 1.2 DRV8412EVM Features

- PWM input motor driver module
- Self-contained protection system (short-circuit and thermal)
- Double-side, plated-through PCB layout

### 1.3 DRV8412EVM Specifications

Table 1. Key Parameters

| Output Stage Voltage | 0 to 50 Vollts |
| :--- | :--- |
| System Supply Voltage | 12 Volts |
| Number of Output | $4 \times$ Half Bridge, $2 \times$ Full Bridge |
| Output Current per Output Pin | Up to 6 A peak, 3 A continuous |

Figure 2. The TI DRV8412EVM Motor Drive Evaluation Board - Bottom View

## 2 Operation

### 2.1 Quick Start List for Stand-Alone Operation

Follow these steps to use the DRV8412EVM stand-alone or when connecting it into existing circuits or equipment. Connections to the EVM module can be made by inserting stripped wire for the power supplies and output connections.

### 2.1.1 Power Supply

Two power supplies are required to power up the EVM. One is needed for system power, logic and gate drive, while the second is for the output stage power supply. Please use enough wire gauge such that the impedance is relatively low. The output stage supply should use at least AWG 22 wire.

Table 2. Power Supply Requirements

| Description | Voltage Range | Current Requirements | Wire Size |
| :--- | :--- | :--- | :---: |
| System Power Supply | 12 V | 1 A | 26 AWG |
| Output Stage Power Supply | $0-50 \mathrm{~V}$ | 6 A | 22 AWG |

### 2.1.2 Evaluation Module Preparation <br> Inputs and Outputs

1. Ensure that all external power sources are set to OFF.
2. Connect load(s) across the outputs (OUTX) or between the outputs and ground depending on the configuration requirement.
3. Connect an external 12 V power supply to the terminal block marked GVDD and GND (J2). Make sure the wires are connected with correct polarities.
4. Connect an external regulated power supply adjustable from $0 \mathrm{~V}-50 \mathrm{~V}$ to the terminal block marked PVDD and GND (J5). Make sure the wires are connected with correct polarities.

## Control Signals

1. Install the mode jumpers on M3, M2, and M1 depending on the mode desired. See "Mode Pin Configurations" table for detail.
2. Set RESET_AB (S1) and RESET_CD (S2) switches to low (RESET) position.
3. Prepare the PWM signals needed to control the power stage and make sure that PWM logic is 3.3 V not 5 V .

### 2.1.3 Power Up

The DRV8412 device doesn't require a special power up sequence, but the following sequence is recommended for the EVM.

1. Turn on GVDD (12V) power supply.
2. Enable PWM signals.
3. Set RESET_AB (S1) and RESET_CD (S2) switches to high (NORMAL OPERATION) position.
4. Turn on the external PVDD power supply to the desired voltage gradually.
5. Adjust the duty cycle of PWM input signals to the desired value. The EVM should begin to operate normally.

### 2.1.4 Fault Conditions

When device shuts down due to any fault conditions, flip RESET_AB and/or RESET_CD switches back and forth to clear the fault and reset the device. If this doesn't work for any reason, turn 12V GVDD power supply off and on again to clear the latch. Please inspect the board and test condition carefully to understand the problem before next operation.

Table 3. Mode Pin Configurations

| MODE PINS |  | OUTPUT <br> CONFIGURATION | DESCRIPTION |  |
| :---: | :---: | :---: | :---: | :--- |
| M3 | M2 | M1 |  |  |
| 0 | 0 | 0 | 2 FB or 4 HB | Dual Full Bridges (two PWM inputs each full bridge) or four half bridges with cycle-by-cycle <br> current limit |
| 0 | 0 | 1 | 2 FB or 4 HB | Dual full bridges (two PWM inputs each full bridge) or four half bridges with OC latching <br> shutdown (no cycle-by-cycle current limit) |
| 0 | 1 | 0 | 1 PFB | Parallel full bridge with cycle-by-cycle current limit |
| 0 | 1 | 1 | 1 FB | Dual Full Bridges (one PWM input each full bridge with complementary PWM on second half <br> bridge) with cycle-by-cycle current limit |
| 1 | x | x |  | Reserved |

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to Tl's terms and conditions of sale supplied at the time of order acknowledgment.
TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with Tl's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.
TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.
TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.
Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. Tl is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.
TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
