<sup>1</sup> Full dynamic specifications may not be met at full load when output voltage is trimmed above 13 V.

<sup>2</sup> Max Trim 14 V when used with High Power Module

<sup>3</sup> Max Trim 56 V when used with High Power Module

<sup>4</sup> a) Only one High Power module (CmE or CmF) can be used per CoolPac.

b) During load transients starting from 0% load on the High Power modules, other modules in the CoolPac may experience an output voltage dynamic during the load change. Contact applications support for details or support..

<sup>5</sup> For the CmG module the max combined power of both outputs is 200 W.

<sup>6</sup> For the CmH module the max combined power of both outputs is 180 W.

\*SEMI F47 compliant at input voltages > 180 VAC. Consult Advanced Energy for details.

<sup>7</sup> When a CmK module is used in the same pack as a CmE or CmF module, one module slot must remain unpopulated.
